

Survey

It was agreed that a full scale survey should be undertaken by a professional organisation to ensure that the questions were professionally compiled and 276 responses collated with proven statistical relevance. There has been previous experience with a professional survey organisation and thus the availability of previous data for comparison purposes made it the logical first step and CFEP were recruited to carry out the survey.

The CFEP survey comprised of 28 questions in separate sections on staff, clinicians and the Practice in general were distributed randomly over a period of six weeks.

Results

The Practice achieved an overall 88% on our patient survey. The scores were mostly equal or higher than the national average score based on practices of similar patient list size.

Out of the patients who completed the survey;

44% rated us as excellent

27% as very good

17% as good

and only 6% as fair.

Key findings from the survey

The survey questions were divided into four categories and the most prominent findings from each were as follows;

1. About the Practice- Our patients found Telephone access to the Practice very difficult.

2. About the Practitioner- Our patients were satisfied with their visit, felt reassured and respected by the practitioners.

3. About the Staff- Our patients felt that our staff were informative and respectful.

4. And Finally – Our patients were satisfied with our reminder systems and our complaints/compliments procedures

Which responses were the most positive?

I have been a patient in this practice for many years and have always been treated with the best respect possible.

I am happy with my treatment and the thorough examination and respect for my needs.

The nurse at my appointment this time was excellent in her dealing with me, and the time allowed.

5 days a week availability for the nurse practitioner. Find her very skilled and approachable.

My marking of your survey is not just traditional flattery, but an expression of my gratitude for a very high standard of service.

The nurses had first class personal approach. I would not presume to suggest how she could improve medically!

Which responses were the least positive?

If the outcome of the result is 'no action', I would suggest telling the patient the results over the phone rather than making an appointment.

More flexible with appointment times and ability to book an appointment at a set time in advance.

Please fix the patient self check in screen!

Ensure a 'smile' from the receptionists.

I have trouble trying to get an appointment with the GP by ringing at 8am in the morning. It takes over 15 minutes and then all appointments have been taken.

Obtaining an appointment is very difficult. Suggest extended hours for seeing the nurses and nurse practitioners.

Patient Participation Group Profile

AGE BANDS	PRACTICE POPULATION %	PPG PROFILE %
UNDER 16	X	X
17-24	12	0
25-34	21	0
35-44	18.4	7
